

# MIREC

Maternal-Infant Research  
on Environmental Chemicals

Northern Ontario Health Conference

**Paul Fredette, MD CCFP**

# Awareness of Environmental Exposures & Impacts Is Growing

- Air pollution
- Water contamination
- Harmful substances in physical structures and workplaces
- Food contamination
- Personal care products

# Awareness of Reproductive Effects Is Growing

*“...exposures of males and females to foreign substances prior to conception can affect both their ability to conceive and the health of their offspring.”*

Davis DL, et al.  
JAMA. 1998

# Environmental Reproductive Health

– Interdisciplinary study of :

- exposures to environmental contaminants (ECs),
- during critical periods in development, and
- their potential effects on all aspects of future reproductive health throughout the life course including:
  - conception,
  - fertility,
  - pregnancy,
  - child and adolescent development, and
  - adult health.

# Environmental Contaminants (ECs)

- Since World War II, there has been a dramatic increase in human exposures to both natural and synthetic chemicals.

# Environmental Contaminants (ECs)

- In US, as of 2006...

about 1/10 have had some  
testing for  
potential health effects

However, not necessarily  
for reproductive/  
environmental effects

# Common Environmental Contaminants

- **Pesticides and Herbicides**  
atrazin & chlorpyrifos
- **VOCs – Volatile Organic Compounds**  
benzene, toluene, & chloroform
- **Heavy Metals**  
lead, mercury, cadmium, manganese, & arsenic
- **Air Contaminants**  
carbon monoxide, ozone, particulate

# Common Environmental Contaminants

- **Persistent organic pollutants (POPs)**  
dioxins, polychlorinated biphenols (PCBs)  
dichlorodiphenyltrichloroethane (DDT)  
dichlorodiphenyldichloroethylene (DDE)
- **Plasticizers, Surfactants, and Flame Retardants**
- **EDCs – Endocrine Disrupting Compounds**  
exogenous substances that alters the functioning of the endocrine system  
causing adverse health effects in an intact organism or its progeny

# Endocrine Disrupting Chemicals (EDCs)

- EDCs **interfere with** the production, release, transport, metabolism, binding, action, or elimination of **natural hormones** in the body that are responsible for the maintenance of homeostasis and the regulation of developmental processes.

# Endocrine Disrupting Chemicals (EDCs)

- EDCs encompass a variety of chemical classes, including natural and synthetic hormones, plant constituents, pesticides, compounds used in the plastics industry and in consumer products, and other industrial by-products and pollutants.

# Endocrine Disrupting Chemicals (EDCs)

- Some of the common EDCs include
  - Bisphenol A (BPA),
  - Phthalates,
  - Perfluorinated compounds (e.g., PFOS, PFOA)
  - Brominated flame retardants
  - Polybrominated diphenyl ethers (PBDEs)
  - Polychlorinated biphenyls (PCBs)
  - Organochlorine metabolites (e.g., DDE, aldrin, mirex)
  - and other pesticides (e.g., vinclozolin, atrazine).

# Endocrine Disrupting Chemicals (EDCs)

- EDCs are often pervasive and widely dispersed in the environment.
- Some are persistent, can be transported long distances across national boundaries, and have been found in virtually all regions of the world.
- Others are rapidly degraded in the environment or human body or may be present for only short periods of time but at critical periods of development.

# Critical Windows of Sensitivity to EDCs

## Female Development

Secondary Sexual Characteristics

Ovary/Oocytes

Gonad

Mammary Gland

Secondary Sexual Characteristics

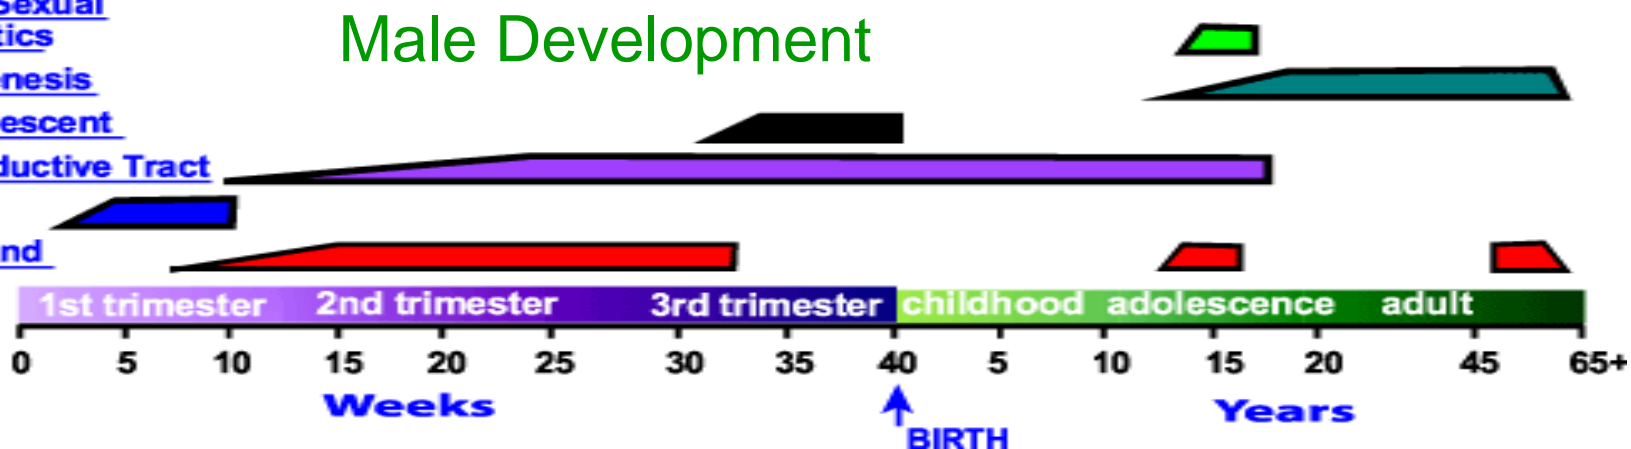

Spermatogenesis

Testicular Descent

Male Reproductive Tract

Gonad

Prostate gland

<http://www.emcom.ca/EM/windowsfr.shtml>

# Human health effects of some Endocrine Disrupting Chemicals EDCs

# PCBs

Found in Coolants and Lubricants in Electrical Equipment before 1977

Health Effects:

- Altered Neurodevelopment as a result of in utero exposure
- Endometriosis
- Reduced Fertility
- Decreased Semen Quality
- Miscarriage
- Altered pubertal development
- Reproductive tract malformations

# Phthalates: Potential developmental and reproductive effects

- Decreased Anogenital Distance (AGD) in males
  - Disbalance in testosterone production
  - Leydig cells differentiation

- Decreased AGD in 106 boys (1, 2)
- Lower post-natal surge of reproductive hormones (3)

# Human Health Effects of Heavy Metals Exposures.

Lead

Mercury

Cadmium

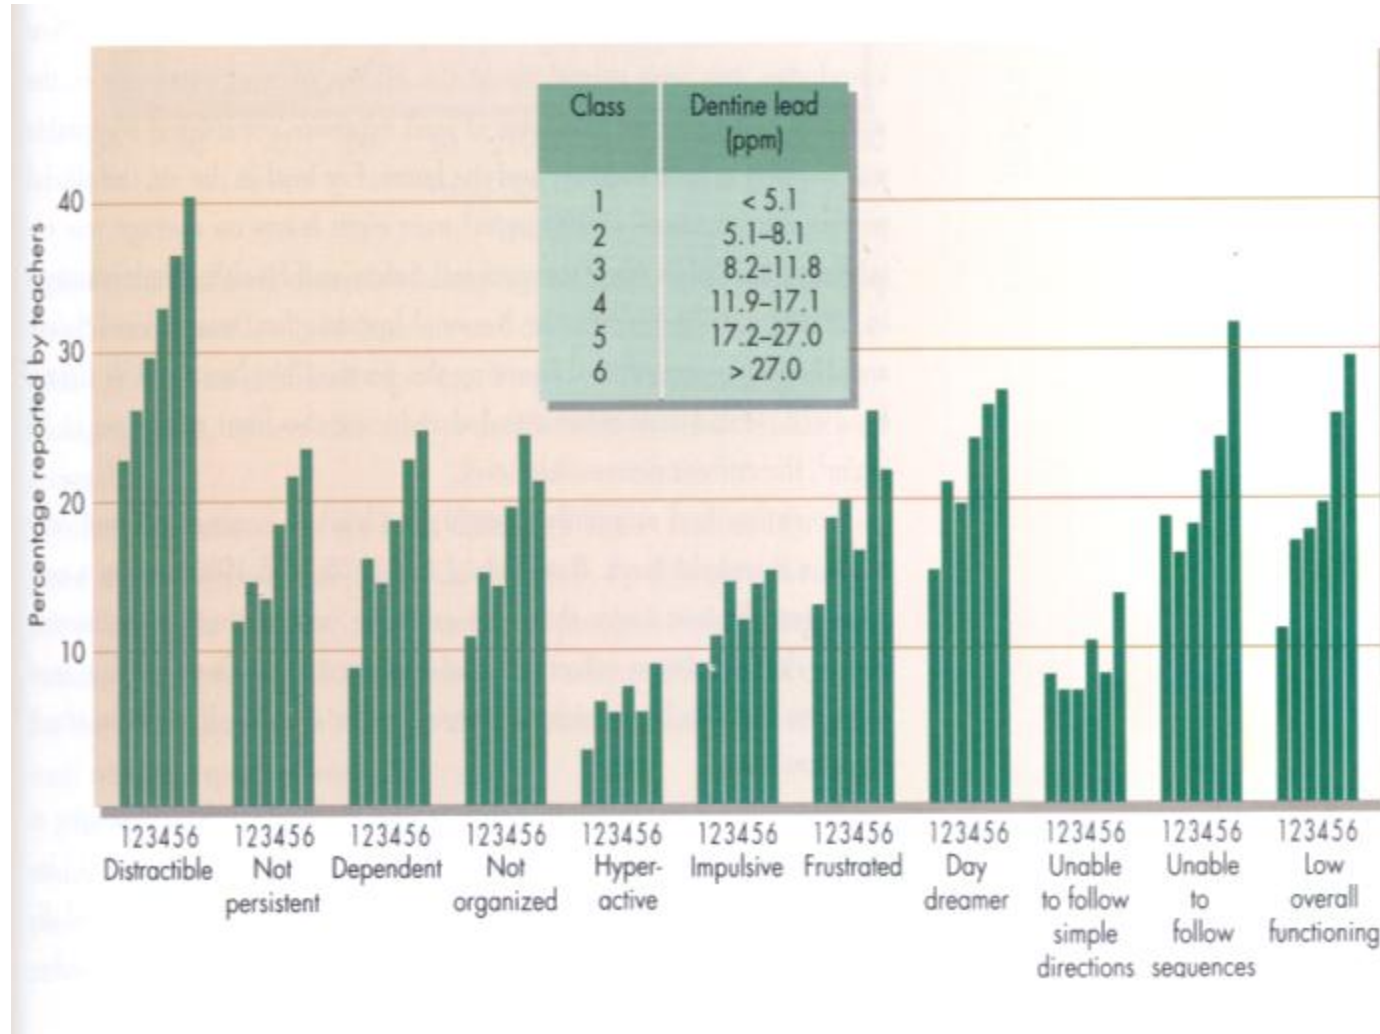

Arsenic

Manganese

Many others...

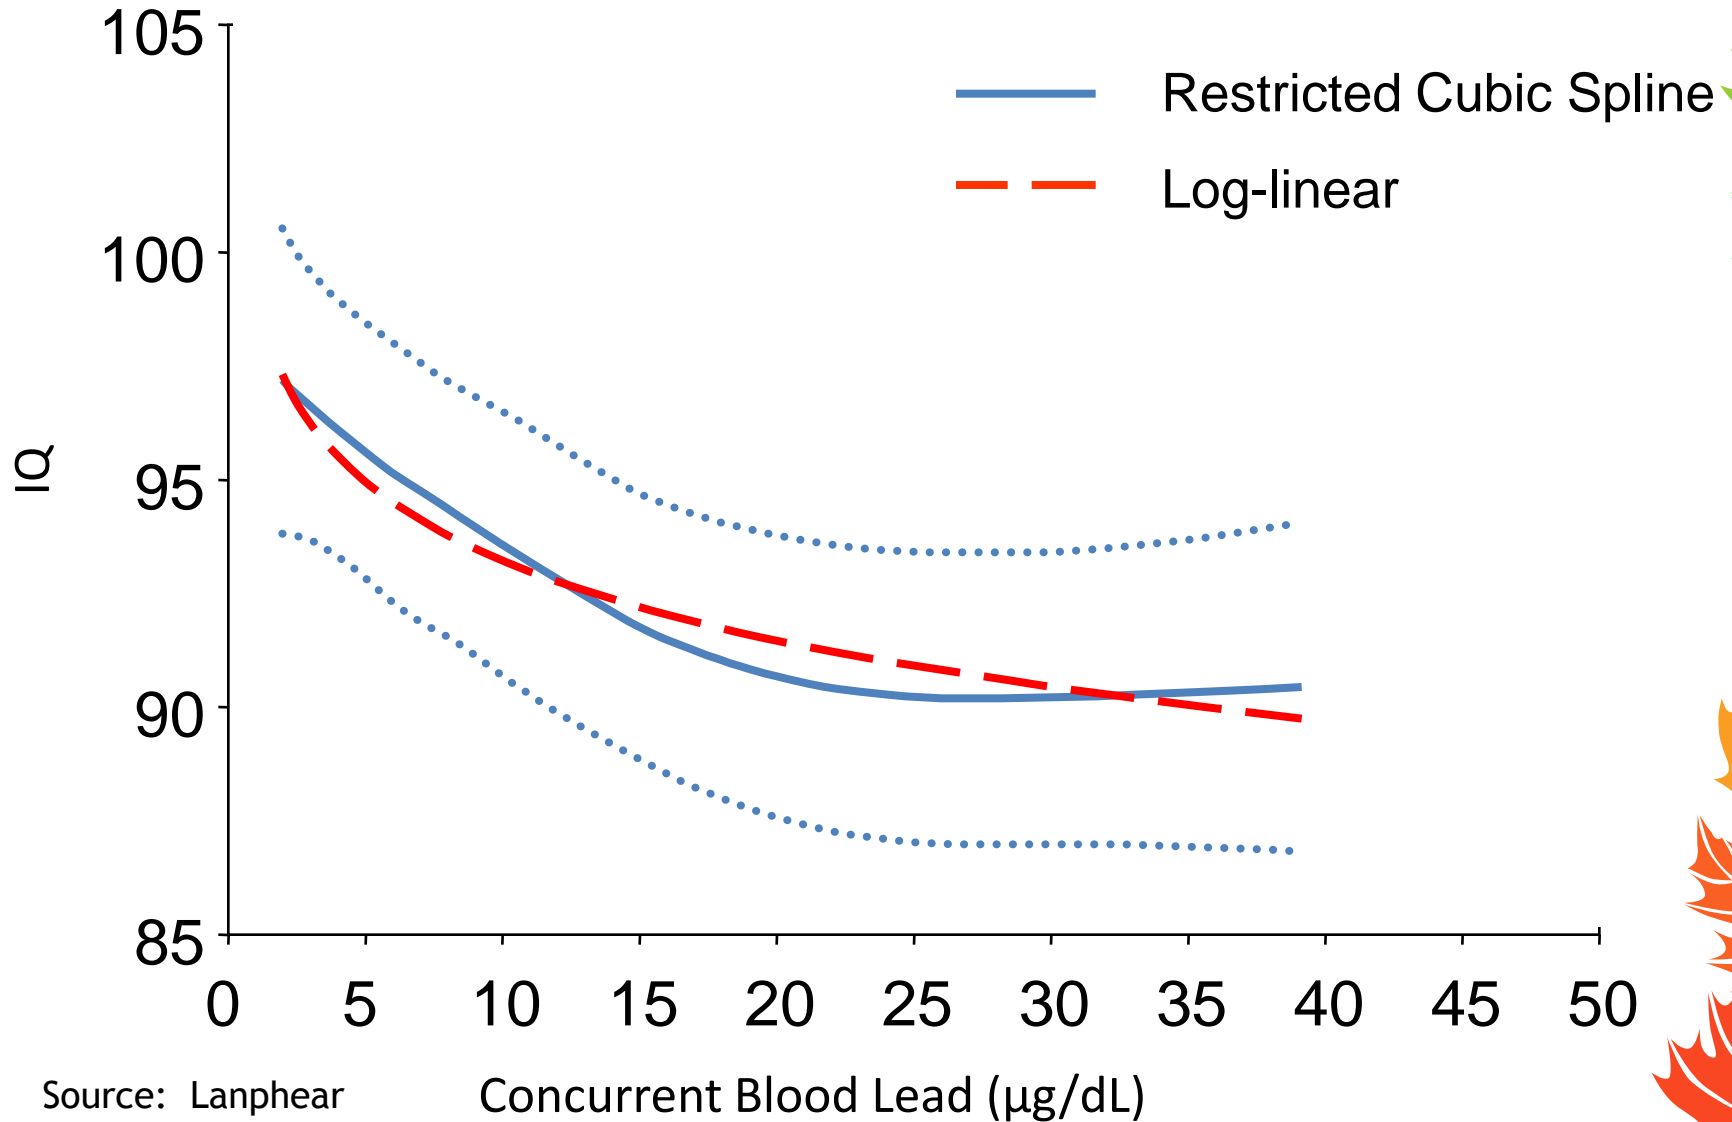

# Lead-associated Behavioral and Emotional Problems in Children

Needleman HL, et al. N Engl J Med 1979;300:689-95.

# Relationship of Concurrent Blood Lead Concentration with Children's Intellectual Function

Source: Lanphear

Concurrent Blood Lead ( $\mu\text{g/dL}$ )

# Risk of ADHD by Blood Lead Levels in US Children, NHANES 1999-2002

Braun J, et al. EHP 2006;17:500-505. Adjusted for child's age, sex, race and ethnicity, preschool attendance, serum ferritin, prenatal tobacco exposure and health insurance status.

# LEAD: Burden of Disease

- Total Annual Cost in the US:  
Childhood Lead Poisoning – 43.4 billion USD.  
Childhood Asthma – 2.0 billion USD.
- Though current exposure levels are expected to have decrease in Canada in the last 25 years, lead toxicity remains a problem as Lead bioaccumulates in adult bones and becomes mobilized during pregnancy and lactation.
- Lead freely crosses the placental barrier and bone lead contributes a substantial fraction of the lead in cord blood.
- Maternal blood lead and mercury are strong and significant predictors of infant blood levels at birth.

# Sources of Exposure

Chemical Group	Biomarkers	Uses and Sources of Exposure
Metals/metalloids	Lead	Gasoline, paint, dust, drinking contaminated water
	Mercury	Batteries, fluorescent light bulbs, fish consumption, dental amalgams
	Cadmium	Pigments, municipal waste incineration, cigarette smoke
	Arsenic	Pressure-treated wood, drinking contaminated water
	Manganese	Burning of fossil fuels
Plasticizers	Bisphenol A (BPA)	Polycarbonate food containers, refillable water bottles, metal food and beverage cans, dental sealants
	Phthalate metabolites	Polyvinyl chloride flooring, toys, detergents, personal care products, food packaging, dust

# Sources of Exposure

Chemical Group	Biomarkers	Uses and Sources of Exposure
Surfactants	Perfluorinated compounds (e.g., PFOS, PFOA)	Non-stick cookware, stain repellent furnishings, fast-food packaging
Pesticides	Organophosphate metabolites	Insecticides, food contaminant
Flame Retardants	Polybrominated diphenyl ethers (PBDEs)	Electronic equipment, furniture, construction materials, textiles, foods, house dust
Persistent Organic Pollutants (POPs)	Polychlorinated biphenyls (PCBs)	Industrial equipment, food
	Organochlorine metabolites (e.g., DDE, aldrin, mirex)	Insecticides, food contaminant
Tobacco Smoke	Cotinine	Active and passive exposure to tobacco smoke

## Epidemiological evidence for causal relationships between reproductive and child health outcomes and environmental chemical contaminants.

“There is a great need for population-based, multidisciplinary and collaborative research on the many relationships supported by inadequate evidence, as these represent major knowledge gaps”.

# Objectives

- To obtain national-level data on maternal and neonatal exposure to priority environmental contaminants
- To obtain Canadian data on smoking behaviour and exposure to tobacco smoke (active and passive) in pregnancy
- To determine if heavy metal exposure is related to elevated maternal blood pressure, hypertension, altered sex ratio and fetal growth restriction

# Objectives

- To obtain contemporary levels of priority environmental chemicals, selected nutrients and relevant immunoprotective endpoints **in mature human milk**
- To obtain contemporary levels of **maternal hair-mercury**
- To characterize dietary exposure of breastfed infants and allow for **time-trend analyses** of those analytes which were included in previous **human milk surveys**

# Study Design

# Study population

## Eligibility criteria

- Inclusion Criteria

1. The woman is pregnant between 6<sup>0/7</sup> and 13<sup>6/7</sup> completed weeks
2. Age  $\geq$  18 years
3. Speaks a language known by the medical staff (French or English)
4. Plans to deliver in a study participating hospital
5. The woman is able to understand and sign a consent form

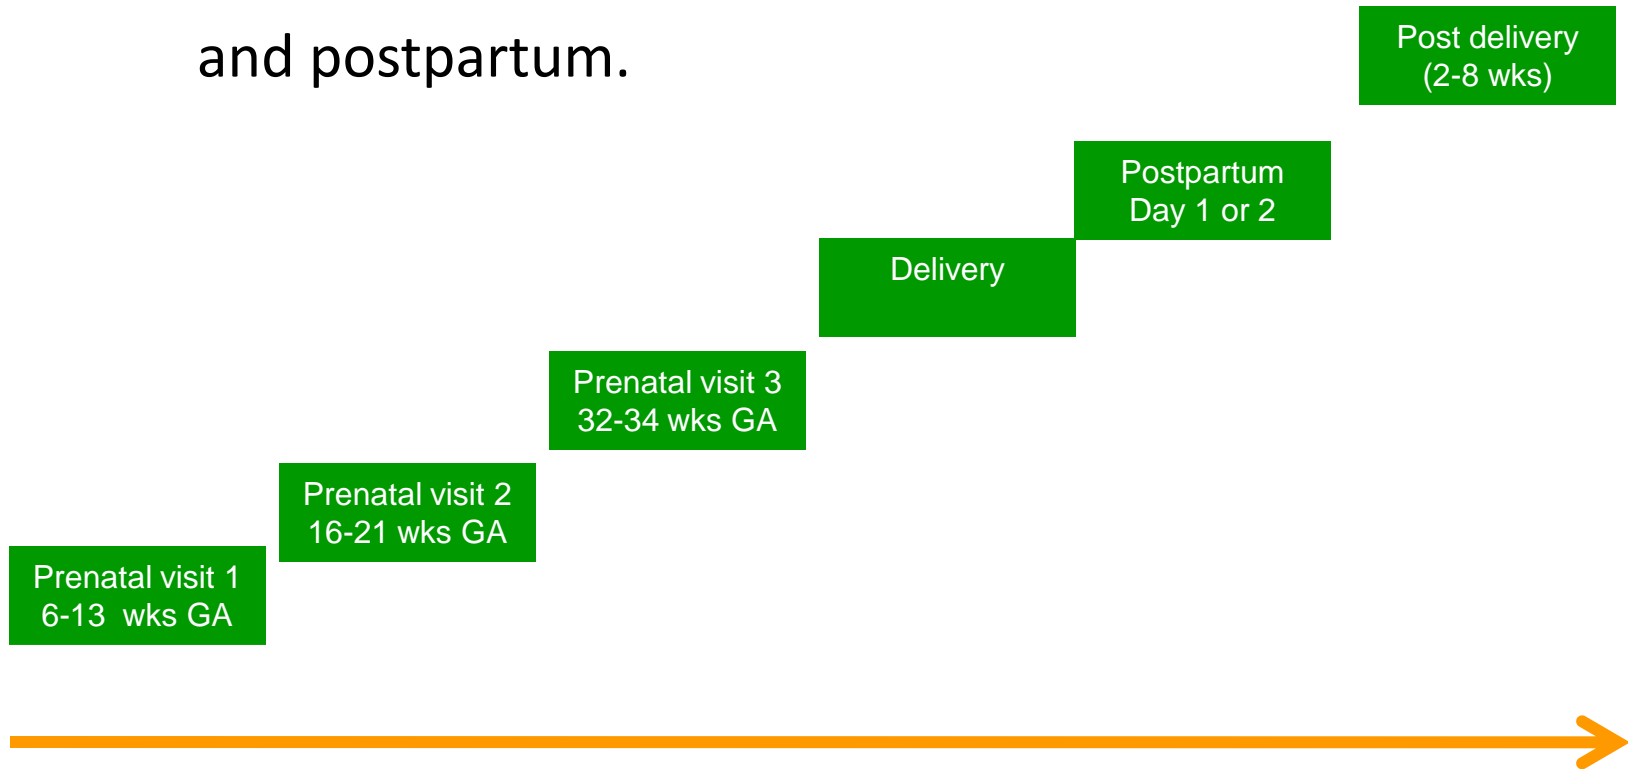

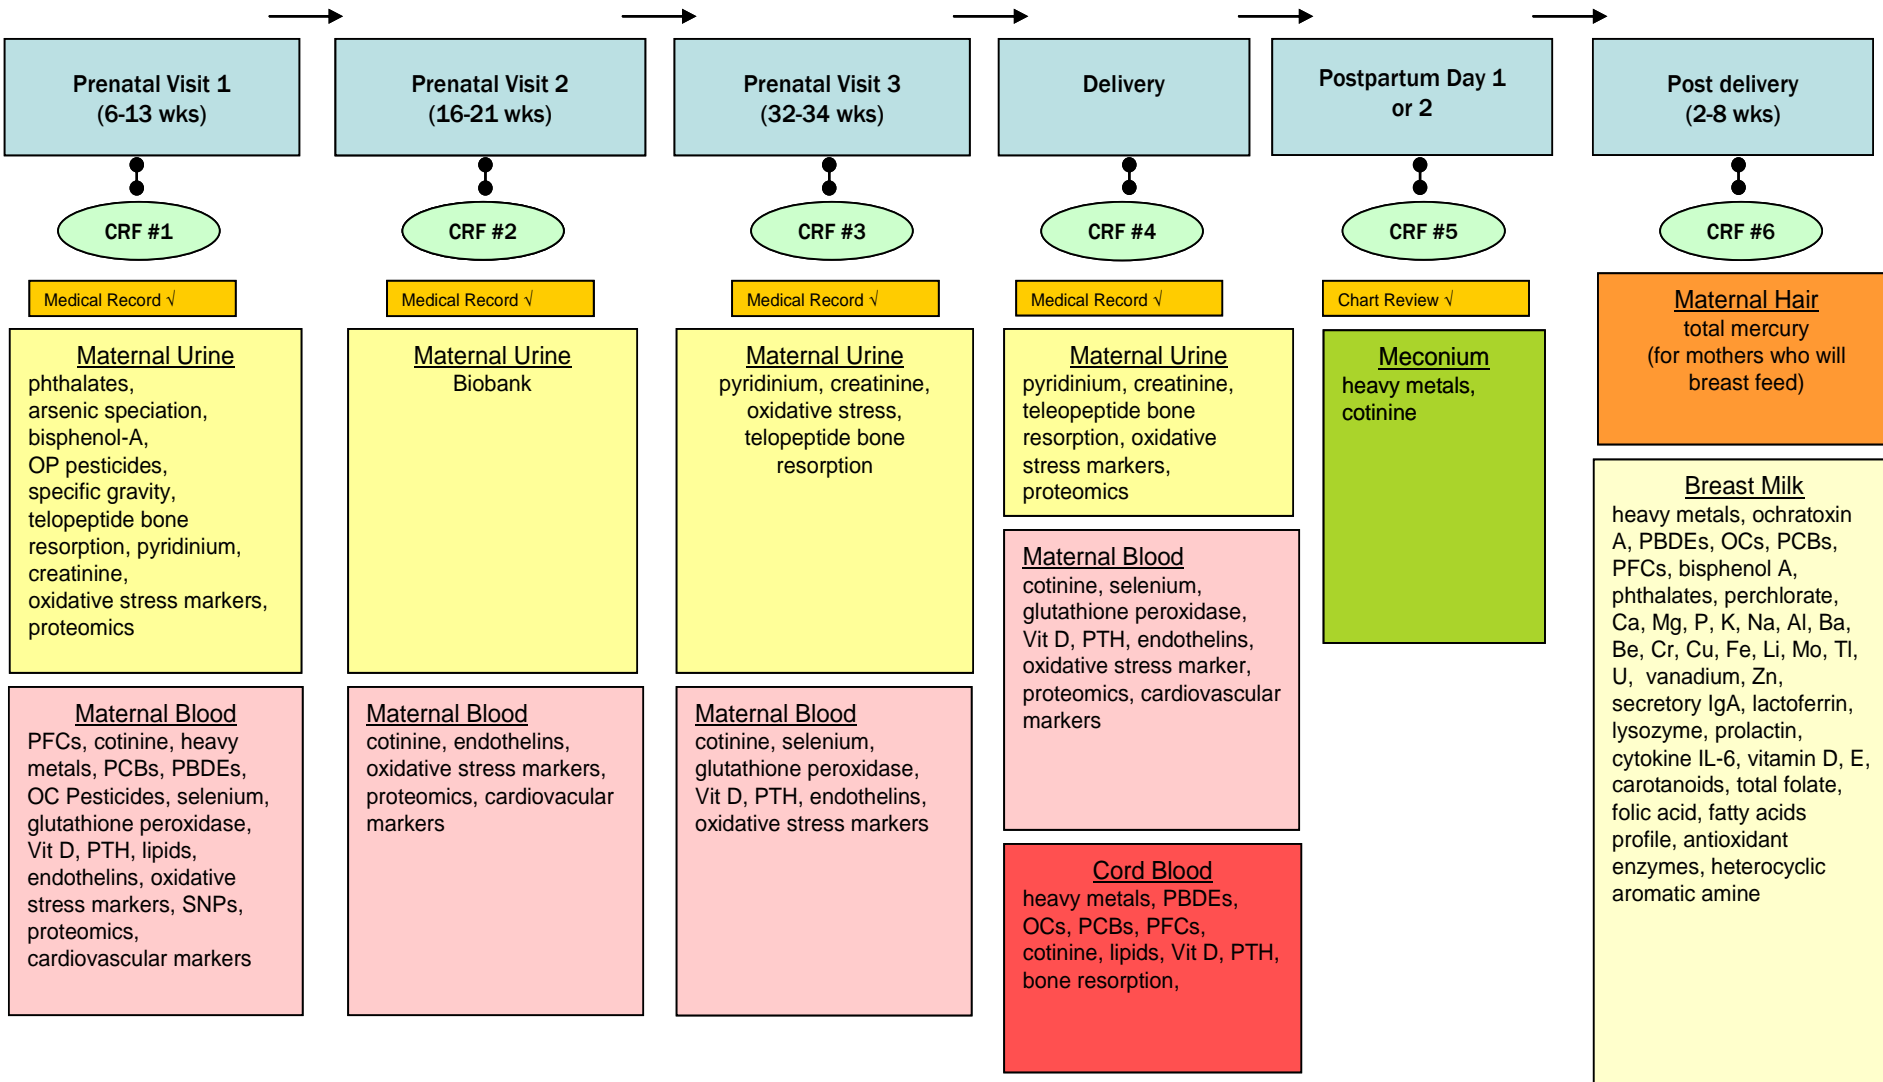

# Study Design

- 2,000 pregnant women recruited during 1<sup>st</sup> trimester
- 6 points of contacts which span each trimester of pregnancy, delivery, and postpartum.

# Data Collection

# Nutritional Data Collected

## ➤ **First Trimester**

- Supplements (product names)
  - Prenatal vitamins
  - Folic acid supplements
  - Other supplements
- Beverages (milk, water, juice, tea, coffee, alcohol)
- Species of fish

## ➤ **Second Trimester** (take home questionnaire)

- Within past 24 hours  
Name of product, amount taken, frequency
- During last 30 days  
Name of product, amount taken, frequency

# Nutritional Data Collected

- **Second Trimester (continued)**
  - Food Frequency Questionnaire
    - During the past month
    - Frequency
    - Serving size
    - Primarily focusing on calcium and iron sources
- **Third Trimester**
  - Beverages (milk, water, juice, tea, coffee, alcohol)
  - Species of fish
- **Lactational questionnaire**
  - Fish species
  - Beverages
  - Nutrient supplements while breastfeeding

# Other Data Collected

- 1<sup>st</sup> and 3<sup>rd</sup> Trimesters
  - Smoking (active and passive)
  - Socio-demographics
  - Obstetrical history
  - Employment
  - Environmental exposures (work, home)
  - Physical activity
  - Sunlight exposure
  - Anthropometry
  - Blood pressure
- Pregnancy outcomes

# Additional and Future Research

- **Biobank** of maternal and infant biospecimens (blood, urine, meconium, cord blood, maternal hair, breast milk)
  - At the conclusion of the study, there will be approximately 65% of the aliquots in the MIREC biobank.
  - Long-term storage of these valuable samples in the biobank will be used for future research on environmental chemicals and maternal and infant health.
- 

# Additional and Future Research

## MIREC-ID: Effects of ECs on Infant Development

- Health Canada is now providing funding to follow the infants from 0 to 6 months of age.
- Growth, Sexual & Sensory Development.
- Correlations will be made with in utero exposures to the variables quantified in MIREC.

Co-PIs: Gina Muckle, Tye Arbuckle, William Fraser, Bruce Lanphear, Jean Seguin

# MIREC-ID

Tests performed on the infant	Birth	Six months
<b>Sexual development</b>		
Genital clinical exam	√	
Pigmentation of the areolar and scrotum skin	√	√
Steroid hormones	Biobank	
<b>Growth</b>		
Weight	√	√
Head, chest and abdominal circumference	√	√
Height	√	√
Back and arm skinfold thickness	√	√

# MIREC-ID

Tests performed on the infant	Birth	Six months
Neurobehavioral/Sensory development		
Hearing screening (tympanometry, otoacoustic emission)		√
Electrophysiological testing: brainstem auditory evoked potentials 2 (BAEP)		√
Eye examination		√
Teller Acuity Cards: TAC		√
Visual reinforcement audiometry (VRA)		√
Electrophysiological testing: visual evoked potentials (VEP)		√

# MIREC-ID

Tests performed on the infant	Birth	Six months
Mechanisms of action, mediators and moderators		
Heart rate variability (HRV) and vagal tone		√
TSH, total T4, free T4, total T3, iodine, TTR	Biobank	
Other parameters:	Biobank	
long chain polyunsaturated fatty acids (LCPUFAs)		
Trans fatty acids (TFA)		
iron, zinc, copper, selenium, iodine		
vitamin A, C, E and folate		
Genomics		

# MIREC-ID

Maternal Variables	Delivery	Six months
Mechanisms of action, mediators and moderators		
Breastfeeding	√	√
Postnatal Smoking	√	√
Alcohol use	√	√
BMI		√
Questionnaire (psycho-social factors and maternal stress)		√
TSH, total T4, free T4, total T3, iodine, TBG, TPO-Ab	Biobank

The screenshot shows the MIREC website homepage in a browser window. The URL is [www.mirec-canada.ca/site/index.php](http://www.mirec-canada.ca/site/index.php). The page features a search bar, language options for English and Français, and a navigation menu with links for HOME, ABOUT THE STUDY, PARTICIPATING CENTRES, NEWS AND USEFUL LINKS, and CONTACT US. The main content area includes a 'Study Member Login' section with fields for Username and Password, a 'Remember Me' checkbox, and a 'LOGIN' button. Below the login section is a 'Who's Online' section stating 'We have 1 guest online' and a 'Useful links' section with featured links to 'Health Canada MIREC', 'Environmental and Workplace Health. Maternal-Infant Research on Environmental Chemicals (The MIREC Study)', 'Chemical Substances Human Biomonitoring of Environmental Chemical Substances', 'It's Your Health Healthy Living... Alphabetical List of Articles', and 'Dacima Software Inc.'. The main heading reads 'Maternal-Infant Research on Environmental Chemicals (MIREC): A National Profile of In Utero and Lactational Exposure to Environmental Contaminants'. The text states: 'Recent reports have raised concerns about the number of chemicals in our bodies and the health effects, if any, that may be associated with the levels measured. Canadian data on this issue are limited. This Canadian study has the following purposes:'. A list of purposes follows: 'to measure the extent to which pregnant women and their babies are exposed to common environmental chemicals;', 'to measure some of the beneficial elements in human breast milk;', 'to assess what health risks, if any, are associated with the chemical levels measured, with a focus on heavy metals such as lead and mercury;', and 'another goal of this study is also to create a data and biological specimen bank for further research on fetal growth, pregnancy and health of mother and baby.'. A photograph of a pregnant woman in a blue top is shown. At the bottom, the 'co-principal investigators' are listed: 'Tye Arbuckle, PhD, Healthy Environments and Consumer Safety Branch, Health Canada' and 'William Fraser, MD, Professor and Chair'.
