Parents’ experiences and nurses’ perceptions of decision making about childhood immunization

SHELLY HOSMAN

NHRC CONFERENCE
SEPTEMBER 21, 2018
Disclosure of Affiliations, Financial Support, and Mitigating Bias

Shelly Hosman:

Affiliations: I have no relationships with for-profit or not-for-profit organizations.

Financial Support: This session/program has not received financial or in-kind support.
Sparking of an idea
Goals/objectives of the research

- explore what is experienced
- understand particular and various experiences
- Impact professional development
- guide future clinicians

Purpose of this qualitative study

1) What are the particular features inherent in decision making about childhood immunizations as experienced by parents?

2) How do nurses characterize their perceptions of parental decision making about childhood immunization?
Literature review/theoretical framework

Contextual Influences
- Media messages
- Socio-political culture

Individual Influences
- Past experiences with vaccination
- Trust in healthcare professionals and health system
- Awareness of information about vaccines
- Attitudes and beliefs about immunization

Vaccine-specific influences
- Alternate schedule
- Role of healthcare professionals
Methodology

Interpretive Description

Examination of multiple, complex, subjective realities when little is known or what is known is not fully integrated to guide nursing practice

Sample and setting
Inclusion and Exclusion criteria
Data collection
Findings

- Searching for information
- Deliberating before deciding
- Bearing responsibility

Protection
Findings
Findings

ACCEPT, DELAY, OR DECLINE

Deliberating before Deciding
Findings

BEARING RESPONSIBILITY

Deliberating
Believability
Trustworthiness
Recommendations

Future study - relationship between nurse-experienced success, failure and immunization uptake.

Nurse-led education sessions within a community environment

Environmental scan on the availability of historical and contemporary information sources

Nurse-led forums

Future study to explore the relationship between health literacy and autonomous decision making for health.

Partnerships with existing groups within the community

Health literacy added to curriculum
